Abstract (en)

[origin: WO2016023627A2] The invention relates to a calculation method for designing reluctance systems by balancing the inner and outer system energy using the equation $W=\frac{1}{2}\Lambda(\Theta_a 2+\Theta_b 2+2\Theta_a\Theta_b)$, where $2\Theta_a\Theta_b \neq 0$, according to claim 1. The invention further relates to a computer program comprising program code means, in particular a computer program stored on a machine-readable medium, for carrying out the disclosed calculation method when the computer program is executed on a computer.
