Abstract (en)

[origin: WO2016070997A1] The invention relates to an electrical arrangement (1) comprising a support element (2) on which at least one conductor path (3), at least one electrically operated component (4) and at least one contacting element (5) are arranged; the contacting element (5) is used to establish a current-conducting and/or data-conducting connection to the at least one conductor path (3) of the electrical arrangement (1) that is characterized in that the contacting element (5) includes a cavity (5.2) which is surrounded by a jacket (5.1) and in which at least one contact element (5.3) is located, said contact element (5.3) being connected to the at least one conductor path (3) of the electrical arrangement (1).
