Abstract (en)

The present utility model related to a structural arrangement applied to a bottle cap, belonging to the technical sector of general packaging accessories, and specifically to a cap for bottles containing beverages, such as beer, water, soft drinks or any other beverage that is packaged in a bottle, that provides very advantageous practical, safe and functional results. The present utility model patent comprises a metal cap (1) provided with an L-shaped lever/handle (2) in which the smaller segment (21) and the extremity of the larger segment (22), which is close to the vertex, are attached to the upper face and to the peripheral wall of the cap (1) by welding, gluing, pinning or any other attachment means, the lightly grooved vertical larger segment (22) forming the "handle" having a ring-pull (23) at the extremity of same. Optionally, according to figures 1.6 and 1.8, the extremity of the larger segment (22), which is close to the vertex, is formed around the peripheral wall of the cap (1), forming a corrugated area with the same "relief/molded" system present in the cap (24).
