Abstract (en)

[origin: JP2017161507A] PROBLEM TO BE SOLVED: To provide a timepiece in which the use of energy from an energy source is optimized.SOLUTION: A timepiece regulating mechanism 1 is provided that includes energy storage means 2 delivering an output torque, via a train 3, to a wheel set 4. The wheel set 4 forms a resonator wheel set 5 subjected to the torque from return means 6 and a magnetic escapement mechanism 10, cooperating with the resonator wheel set 5, either directly or via a magnetic stop member 7. The magnetic escapement mechanism 10 is arranged to operate when the wheel set 4 receives a torque higher than or equal to a maintenance torque, and the train 3 includes torque regulating means 30 arranged to deliver to the wheel set 4 a constant torque comprised between 1.0 and 2.0 times the maintenance torque. The torque regulating means 30 includes a fusee 8 of continuously variable cross-section, from which unwinds a chain 9, wound by a drum 21, directly or indirectly driven by the energy storage means 2.SELECTED DRAWING: Figure 1

Abstract (fr)

Mécanisme régulateur (1) d'horlogerie à échappement magnétique comportant un moyen de stockage d'énergie (2), de préférence un bâillet, agencé pour délivrer de l'énergie sous forme d'un couple de sortie (CS), au travers d'un rouage de transmission (3), à un mobile d'échappement magnétique (4) formant un mécanisme d'échappement magnétique (10) avec un mobile de résonateur (5) soumis au couple d'un moyen de rappel (6), ledit mobile d'échappement magnétique (4) coopérant avec ledit mobile de résonateur (5), soit directement, soit au travers d'un arrêttoir (7) magnétique, ledit mécanisme d'échappement magnétique (10) étant agencé pour fonctionner quand ledit mobile d'échappement magnétique (4) reçoit un couple supérieur ou égal à un couple d'entretien (CE) propre audit mécanisme d'échappement magnétique (10), et ledit rouage de transmission (3) comporte un moyen de régulation de couple (30), de préférence une fusée, agencé pour délivrer audit mobile d'échappement magnétique (4) un couple constant compris entre 1.0 et 2.0 fois ledit couple d'entretien (CE).
