Abstract (en)

[origin: WO2016074784A1] The invention relates to a tilting mechanism (11) for a chair, in particular an office chair, comprising a seat base for a person and a foot part for arranging on the base. The seat base can be inclined with respect to the foot base due to the transfer of weight of the person. The invention is characterized in that curved bearing shells (28, 29) are used for bearing the bearing part of the mechanism.
