Abstract (en)

[origin: CA2967701A1] The invention relates to a device for the machine-production of a packing material product consisting of a single-ply or multi-ply continuous paper web, said device comprising a feed system for drawing the paper web into the device, thus defining a conveying direction, and a cutting device for detaching the packing material product from a run of three-dimensional packing material formed in the device from the paper web. According to the invention, a transport device adjoins the cutting device in the conveying direction, said transport device transporting the detached packing material product away from the cutting device.
