Abstract (en)  
[origin: WO2016074809A1] The invention relates to a container made of plastic, in particular a canister, for the storage and/or the transport of liquids, having at least one pouring spout (2) integrally molded on the upper side of the container (1), possibly a handle (5) integrally molded on the upper side of the container (1), and a ventilation duct (6), which extends into the container interior (9) from an upper duct end (7) in the area of the pouring spout or underneath the pouring spout as far as a lower duct end (8). The container is characterized in that, at least in some areas, the cross section of the ventilation duct (6) decreases from the upper duct end (7) as far as the lower duct end (8).
