Abstract (en)
[origin: WO2016074772A1] Winding station and method for winding strips of material, in particular for foils, wherein, as the strip of material continues to run, a removing fork pivots the almost-full roll from a forward position into a rear removal position while a new roll core (28) is brought into a winding position, characterized in that the winding station (20) has means with which the strip of material can automatically be wound onto a new roll core (28) after separation from the full roll.
