Abstract (en)

[origin: WO2016075098A1] The invention relates to an electromechanical device characterised in that it comprises a stack made up of an insulating layer (31) inserted between two solid layers (10, 30), and a micromechanical structure (60, 61) with predetermined thickness suspended above a recess (4) with predetermined depth, the recess (4) and the micromechanical structure (60, 61) making up one of the two solid layers (10, 30) of the stack, and the insulating layer (31) making up the bottom of said recess (4).
