Abstract (en)  
[origin: WO2016075370A1] The present description is related to the field of derivatised parenchymal cellulose obtained by derivatizing parenchymal cellulose to comprise cationic substituents wherein the parenchymal cellulose derivative is capable of forming a continuous gel from an aqueous dispersion at least one point in a concentration range of from about 0.05 wt.% to about 99 wt.% based on total weight of the gel.
