Abstract (en)  
[origin: WO2016075371A1] The present description is related to the field of parenchymal cellulose materials. It provides a method and a product for parenchymal cellulose derivative obtained by derivatizing parenchymal cellulose to comprise anionic substituents wherein the parenchymal cellulose derivative is capable of forming a continuous gel from an aqueous suspension at at least one point in a concentration range of from about 0.05 wt.% to about 99 wt.% based on total weight of the gel.
