Abstract (en)

[origin: WO2016074886A1] The invention relates to an illumination device (300) that is clamped between at least two support points. The illumination device (300) comprises a clamping element (310) that is tensioned between the support points in such a way as to be subjected to great tensile stress. The illumination device (300) further comprises an LED strip (314) that is secured to the clamping element (310) in such a way as to be subjected to low tensile stress.
