Abstract (en)

[origin: WO2016075390A1] The invention relates to a method for connecting a mobile terminal (1) of a user with at least one server of a service provider (3a, 3b, 3c), wherein said method includes the following steps: a server of a service provider stores an identifier of a card assigned to the user by said service provider, corresponding to alias data, in turn associated with a user identifier by means of which the mobile terminal (1) is authenticated with the mobile network; storing, in association with the identifier of the card, first data relative to at least one first transaction performed between the user and the service provider by means of the card; establishing, via the mobile network and by means of a service platform (2) capable of obtaining the alias data, a communication link (E4) between the mobile terminal (1) of the user and the server of the service provider, in which said alias data are used to authenticate the user of the mobile terminal with the server of the service provider; sending to the mobile terminal, via said communication link, information regarding at least one service provided to the user by the service provider in accordance with the first data stored in association with the card identifier corresponding to the alias data used for said communication link.
