Abstract (en)  
[origin: WO2016074909A1] The invention relates to an arrester (10) comprising a first electrode (3), a second electrode (4), and a switch contact (2), wherein in a first state at least one electrode of the first and the second electrode (3, 4) is connected electrically non-conductively to the switch contact (2) and in a second state the at least one electrode is connected electrically conductively to the switch contact (2), a discharging chamber (8) between the first and the second electrode (3, 4), and a short-circuit mechanism (5) which is suitable for short-circuiting the first and the second electrode (3, 4) and for switching the state.
