Abstract (en)

A sheet packaging material is suitable for producing a sealed package (42; 43) intended to contain a product. The sheet packaging material (1) comprises at least a first crease pattern (10) and at least a second crease pattern (20), a common group of crease lines (3) belonging to both the first crease pattern (10) and the second crease pattern (20). The first crease pattern (10) further comprises a first crease arrangement (11) that is specific to the first crease pattern (10). The second crease pattern (20) further comprises a second crease arrangement (22) that is specific to the second crease pattern (20). By folding the sheet packaging material (1) along the first crease pattern (10) a package (42) having a first conformation is obtained and by folding the sheet packaging material (1) along the second crease pattern (20) a package (43) having a second conformation is obtained, the first conformation being different from the second conformation.
