Abstract (en)

[origin: EP3219900A1] The invention relates to a tubular motor drive (1) for a screening device. The tubular motor drive comprises an electrical motor (2), an interchangeable gear set (24) having at least two stages, a further gear set (5) comprising a planetary gear set (6) arranged to be driven by the interchangeable gear set, a coupling means (7) arranged to be rotated by the further gear set (5) and arranged to drive the screening device. The interchangeable gear set (24) is driveably arranged between the electrical motor (2) and the further gear set (5).
