Abstract (en)
[origin: WO2016042279A1] A foldable bed (50) comprising: - a frame (505) that can be folded according to at least one axis comprising a foldable rod (510), - at least two legs (515), each leg being attached to the frame by a link (520), said link allowing said leg to be positioned in a deployed position and in a folded position and - the foldable rod being associated with each link to either side of the folding axis, in which: - each link comprises an opening (525) that passes through said link, and - each leg comprises an attachment (530) to a flexible wire (535) linking two legs and passing through the folding axis of the frame, the wire being tensioned when the rod is unfolded, the tension of the wire moving the legs to be positioned in the deployed position.
