Abstract (en)

[origin: WO2016079284A1] The invention relates to a hand-held machine tool transmission closure having a base body for closing a transmission housing opening of a transmission housing of a hand-held machine tool, in particular a drill hammer or a combi-hammer, wherein the hand-held machine tool transmission closure comprises a tube protruding from the base body, which extends in the transmission housing when the base body closes the transmission housing opening. According to the invention, the hand-held machine tool transmission closure comprises an air channel which extends in a first air channel section through the base body and in a second air channel section through the tube so that an air mass can flow through the air channel into and out of the transmission housing.
