Abstract (en)  
[origin: WO2016079213A1] The invention relates to a composition comprising (a) at least one water-soluble polymer based on (a) 5 to 40 percent by weight of at least one monomer of formula (I) and (b) up to 95 percent by weight of at least one monomer (b) which is different from monomer (a) and comprises acid groups, and (β) at least one associative thickener. Also disclosed is a mixture comprising an inorganic binder und the composition of the invention. A further aspect of the invention is the use of the composition of the invention as a rheological additive.
