Abstract (en)  
[origin: WO2016079020A1] The invention relates to a modular system (10) for structuring or shaping rooms, surfaces, or the like, having a component assembly, comprising at least two modular elements (12) and at least one connecting element (14, 15, 16), wherein the modular element is designed as a box-shaped body, the base surface of which has at least three corners, wherein each corner forms a connecting structure for connecting the modular element to a connecting element, wherein the connecting structure is designed as a circular-arc-shaped contour of the corner together with a cut-out adjacent to the contour, wherein the connecting element forms a pin for each of the connecting structures to be connected, wherein the pin is designed in correspondence with the cut-out and in such a way that the pin can be interlockingly inserted into the cut-out, wherein the connecting element forms a positioning device for positioning the connecting element on the modular element, wherein the positioning device has an axis, wherein the axis is designed in correspondence with the contour and in such a way that the axis can be arranged on the contour.
