Abstract (en)  
[origin: WO2016078886A1] The invention relates to an end position retraction and end position damping device (1) for a slidable leaf as sliding leaf or slidable lift-and-slide leaf (2) of a window or a door, comprising power storage for retracting the sliding leaf (2) into the closed position and a damping element for braking the sliding leaf (2) prior to reaching the end and locking position, which are mounted in a housing (3) of the end position retraction and end position damping device (1). The invention further comprises a driver and control system (4), which is operatively connected to a driver (6) fastened to frame (5), and which is configured to lock the power storage in place in an open position of the sliding leaf (2), and comprising an adaptor piece (7, 8), provided to be fastened to a component of the sliding leaf (2) and connected to the housing (3). The connection of the housing (3) of the end position retraction and end position damping device (1) to the adaptor piece (7, 8) has a height adjusting device (9).
