Abstract (en)

[origin: WO2016079390A1] The invention relates to a heat engine turbocharger intake connector comprising: a fresh air intake, an intake for gases from the recirculation circuit, and an intake for de-oiled gases, characterised in that the connector comprises a supply line with an upstream end connected to the intake for blow-by gases and a downstream end arranged at a level below the intake for the recirculation gases.
