Abstract (en)
It is a hanger with bendable hook, of the type comprised of a body (1), which can be of various shapes depending on the pieces of clothing it is intended to support, and a hook (2). These two components (1, 2) are mutually connected by means of flexible straps, which bend along a central bending line in order to allow the rotating movement of the hook (2); said hanger being provided with a mechanical snap-fit coupling of the "clip" type (10), in the intermediate region between the body (1) and the hook (2), wherein two parts interlock mutually when a pressure is exerted, and move apart from one another when a force is exerted to separate them. Said hanger (100) being characterised in that the snap-fit coupling (10) locks the hook (2) in upright position in line with the body (1) and that the flexible straps (3) allow the rotating movement of the hook (2) from the upright position to a folded/bent position wherein the flexible straps (3) are bent.
