Abstract (en)

[origin: US2017275809A1] A steam de-wrinkling appliance includes a de-wrinkling head connected by a line to a base for producing a steam flow. The de-wrinkling head has a rear portion forming a handle and a flared front portion having a surface with one or a plurality of steam exit holes for distributing the steam flow originating from the base. The de-wrinkling head further includes a device having a movable member capable of assuming a retracted position and a restriction position. The flared front portion encloses a single steam plenum chamber that supplies steam to the steam exit hole or holes.
