Abstract (en)
[origin: WO2016083607A1] The present invention concerns a device for packaging a cosmetic article (29, 42), comprising: - a base (12) defining a storage compartment for a cosmetic article (29); - a plate (16) that is movable in rotation on the base; - a cover (14) that is movable in rotation on the base. The axis of the plate forms an angle smaller than or equal to 90° with the axis of the cover. A housing provided in the plate (16) comprises a bottom (38) and an elastically deformable side wall (56). In a contact configuration, one edge (54) of the plate is in contact with the inner face (60) of the cover. Moving said cover towards the closed position moves the plate slidingly towards a closed configuration. The bottom (38) of the housing is in contact with the base in the contact configuration. Moving the plate to the closed configuration brings said bottom closer to the axis of the plate.
