Abstract (en)

[origin: US2016143417A1] A slim-sized, dual makeup applicator provides two applicators for cosmetic product application or maintenance. The applicators are contained or removably fitted within a single body, providing for a compact arrangement. A longitudinal base has two opposing distal ends, each distal end having either an attached applicator that extends longitudinally outward from the longitudinal base or a recess within the longitudinal base for fitting and containing therein a removable applicator. According to an embodiment, a removable cap may be included to expose and cover the attached applicator. The attached applicator or the removable cap may be configured to contain a cosmetic product for application with the attached applicator; and for the removable applicator portion, the removable applicator or the recess may be configured to contain a cosmetic product for application with the removable applicator.
