Abstract (en)  
[origin: WO2016083574A1] Apparatus for the continuous casting of thin slabs, having a strand guide (20), which is arranged downstream of a permanent mould (10) in the casting direction and which guides the strand (1) output from the permanent mould (10) along a first direction, having an adjoining bending/straightening region (40, 50), which has means for driving and bending the strand (1) in a second direction, which differs from the first direction, having a cutting device (60), which cuts the strand (1) into thin slabs, and having a first furnace (80), which is provided for temperature compensation in the strand (1), characterized in that the first furnace (80) extends in an arched manner at least partially over the bending/straightening region (40, 50) and in part along the second direction.
