Abstract (en)
[origin: WO2016083441A1] The invention relates to a clamping chuck (1) comprising: a coupling section (3); a receiving section (9) having a recess (11); a sleeve (19) which can be inserted into the recess (11) of the receiving section (9) and has a wall (33), which sleeve is used to receive a tool (5); and a securing device (49) for axially fixing a tool (5) inside the sleeve (19). The clamping chuck (1) is characterised in that the securing device (49) has a bolt (51), which is spring-mounted in a recess (69) in the wall (33) of the sleeve (19) and can be moved substantially in the vertical direction with respect to the longitudinal extension of the sleeve (19), and in that the length of the bolt (51) measured perpendicularly with respect to the longitudinal extension of the sleeve (19) is greater than the thickness of the wall (33).
