Abstract (en)

[origin: WO2016082903A1] The invention relates to a holding device for fastening polymeric motor-vehicle bumpers (1) during a machining operation, in particular a punching operation, comprising a main frame (2) and a fastening device (3) for fastening the bumper (1) on the main frame (2). According to the invention, the fastening device (3) has at least one fastening-arm group (4, 5, 6) having at least two fastening arms (7, 8, 9, 10) movable independently of each other for different bumper models (1), wherein the fastening arms (7, 8, 9, 10) have different contact contours (7', 8', 9', 10') that lie against the corresponding bumper model (1) in the fastening position and the contact contour (7', 8', 9', 10') of each fixing arm (7, 8, 9, 10) is matched to the local shape of a specific bumper model (1).
