Abstract (en)  
[origin: WO2016082946A1] A pneumatic vehicle tire having a profiled tread with profile bands (2, 3) which are spaced apart from one another by circumferential channels (7), wherein the channel base (13) is formed, over the entire circumference of the pneumatic vehicle tire, from at least one first axial extent section (15) and at least one second axial extent section (14) which adjoins the first extent section (15) in an axial direction A, wherein the channel base (13) is formed, in the first extent section (15) along the axial extent thereof, with a spacing T1, measured in a radial direction R, from the radially outer surface (10) and is formed, in the second axial extent section (14) along the axial extent thereof, with a spacing T2, measured in the radial direction R, from the radially outer surface (10), where  $T2 < T1$ , wherein the transition (16) of the channel base (13) from the first (15) to the second (14) extent section is of abrupt – in particular stepped – form.
