Abstract (en)

[origin: WO2016083031A2] The invention relates to a guiding device (100) for an elevator system comprising at least one elevator cab which can be moved by means of a linear drive along the guiding device (100), the guiding device (100) comprising a guide rail (110) on which the at least one elevator cab can be guided, and a stationary part (120) of the linear drive. The guiding device has guiding means (130) which extend at least partly along the guiding device (100) and are designed such that an elevator cab can be moved along them by means of an alternative drive, which is different from the linear drive. The invention also relates to an elevator system and to a method for operating an elevator system.
