Abstract (en)
[origin: WO2016085399A1] A ladder supporting arrangement for stabilizing a ladder during use, comprising an elongated base member (10) mountable to a portion of a base ladder (2), and an elongated top member (35) which is configured to receive a portion of a working ladder (3). The arrangement is configured to be connected to the base and working ladders (2, 3) in such a way so that the working ladder (3) extends away from the base ladder (2) during use. The base member (10) is further configured to rotate about a pivot (45) connecting the base member (10) and the top member (35) in order to adjust the position of the working ladder (3) with respect to the base ladder (2).
