Abstract (en)
[origin: WO2016081969A1] Arrangement (1), comprising a fixture (15) and a support (2), wherein the fixture (15) comprises a module (3) and an attachment element (13) which has a holder (4), a bolt with transverse wings (5) and a spring element (6), wherein the attachment element (13) can be releasably affixed to the module by means of at least one connection means (14), and wherein the spring element (6) is arranged between the holder (4) and the bolt (5) such that spring force acts on the bolt and presses it against the module (3), wherein the support (2) has an opening (9) such that the attachment element (13) of the fixture (15) can be inserted from one side into the opening (9) such that the bolt with transverse wings (5) can be arranged on the other side of the opening (9), and the module (3) forms an end stop at the opening (9), wherein the bolt (5) is mounted so as to be able to pivot with respect to the holder (4) and has an engagement feature (7) for turning the bolt (5) about its longitudinal axis, wherein the module (3) has a recess (8) via which a turning element can be used to apply force to the bolt (5) and, preferably, via which the bolt can then be pivoted.
