Abstract (en)

[origin: WO2016048265A1] The invention is directed to a system and method for visual editing of an input signal. Accordingly, it includes an editing device comprising a device screen, a media module, a user input module, and an output module. The media module receives an input signal which includes at least one visual component. The device screen comprises a source screen and a delay screen, wherein the input signal is displayed on the source screen in real time, and the input signal is displayed on the delay screen in delay time, with the delay time being adjustable. The user input module allows the user to create at least one clip comprising a portion of the input signal as it is displayed on the delay screen. The output module is structured to output the clip.
