Abstract (en)

[origin: WO2016082993A1] The invention relates to a method for editing a digital map of a transport vehicle for transporting vehicles, wherein the map has one or more digital reference locations that are each associated with real reference locations of the transport vehicle, wherein further digital locations on the digital map are derivable from the one or more digital reference locations, wherein the further digital locations are each associated with further real locations of the transport vehicle, comprising the following steps: ascertaining respective reference coordinates of the one or more real reference locations of the transport vehicle based on a reference coordinate system, so that the ascertained reference coordinates are associated with the corresponding digital reference locations, deriving respective coordinates of the further digital locations on the digital map from the reference coordinates of the one or more reference locations on the basis of a derivation specification, so that the further digital locations on the digital map each have coordinates associated with them based on the reference coordinate system, so that an edited digital map of the transport vehicle is produced in which the digital locations have associated coordinates based on the reference coordinate system. The invention additionally relates to an apparatus for editing a digital map of a transport vehicle. The invention additionally relates to an apparatus and a method for editing a digital map of a transport vehicle. The invention additionally relates to a shipment system and to a computer program.
