Abstract (en)
[origin: WO2016083588A1] The invention relates to a hoist-actuating switch (7), comprising a switch housing (5) and a plurality of switch elements (1), wherein each switch element comprises a substantially cylindrical switch plunger (12) guided in a sleeve (10) in a rotationally fixed manner; a push button (14) that is acted upon by the switch plunger (12), preferably by the underside (16) thereof; an optical mark (20) that is mounted on the upper end face (18) of the switch plunger (12); a rotation-symmetrical cap (24) that is at least partially flexible and has a connection opening (27) to one side, which covers the upper end of the switch plunger (12), and the inner surface (36) of which rests thereon. In the region of the bearing surface, the cap (24) has a window (28) made of a transparent material, by way of which the optical mark (20) is visible through the window (28) from the outside and is shielded from environmental influences.
