Abstract (en)
[origin: WO2016083350A1] The invention relates to a switching device for the on-off switching of a current passing through a current path, having at least one fixed contact (11, 12) and at least one movable contact (14, 15), wherein the movable contact can be moved relative to the fixed contact for making or breaking the current path (10), and a drive (1) for the functional movement of a jumper (17) between a contact-making position and a contact-breaking position, wherein in the contact-making position with the fixed contact the movable contact (14, 15) makes the current path, and having a high-speed circuit breaker (2) for breaking the current path in the event of a short circuit or overload, wherein the armature (4) of the high-speed circuit breaker (2) is rigidly coupled to the movable contact (14, 15).
