Abstract (en)

[origin: WO2016083965A1] The device (1) for the electrical interconnection of electrical cables (5, 9) comprises: - a first male terminal (2, 3), of electrically conductive material, having a first distal portion (2) shaped like a pin and a first proximal portion (3) shaped to define a first bending spring (4) for locking a first electrical cable (5); - a second female terminal (6, 7), of electrically conductive material, having a second distal portion (6) shaped like a bush and a second proximal portion (7) shaped to define a second bending spring (8) for locking a second electrical cable (9); wherein: - the first distal portion (2) being insertable in the second distal portion (6) for the electrical connection of the electrical cables (5, 9); - the first male terminal (2, 3) consists of a first plate element sheared and folded to define both the first distal portion (2) and the first proximal portion (3), which are made in a single monolithic body; - the second female terminal (6, 7) consists of a second plate element sheared and folded to define both the second distal portion (6) and the second proximal portion (7), which are made in a single monolithic body.
