Abstract (en)

A shelving support member (10, 110, 210, 310) includes a unitary member (12, 112, 212, 312) of a formed sheet material and defining a support portion (14, 114, 214, 314) extending along an axis (16, 116, 216, 316) to a first end (18, 118, 218, 318). The unitary member further defines a retention portion (20, 120, 220, 320) disposed at the first end of the support portion and defining a base (22, 122, 222, 322) extending congruently with the support portion at least partially along the axis, the base further extending to a first fold (24, 124, 224, 324) in the member. A reinforcement portion (26, 126, 226, 326) extends from the first fold along and in contact with at least a portion of the base. A first punched area (28, 128, 228, 328) is defined in an aligned manner through both the base and the reinforcement portion of the retention portion, and a coupling element (78, 130, 266, 388) is coupled with the retention portion extending at least partially over the punched area.
