Abstract (en)
An infant chair (10) having a seat portion (14) carried by a support portion (12) is provided. The seat portion (14) comprises two connecting pins (24) at a proximal end thereof received within the support portion (12) for connecting the seat portion (14) thereto. The support pins (24) are disposed above a center of gravity of the seat portion (14) and define a substantially vertical swing axis therebetween. The seat portion (14) is configured to oscillate about the swing axis.
