Abstract (en)
An actuator comprises a cylinder (5) with a member fixing the cylinder to a bracket (6) which is a fixed part of a structure whose movable part is controlled by the actuator. The actuator (2) comprises a movable piston rod (4) with a member fixing the piston rod (4) to a movable part of a structure. The cylinder (5) comprises a clamp (7) tightened around the cylinder (5), wherein the clamp (7) is equipped with a connector (8). The clamp (7) is a fitting with a hole (13) with the inner cross-section corresponding to the external cross-section of the cylinder (5). The clamp comprises on one side a slot (14) with holes (15) for clamping screws (16). On the opposite side to the slot (14) the clamp (7) comprises a member fixing (17) to the clamp (7) the connector (8) which connects the clamp (7) with a fixed part of a structure in the form of a bracket (6). The fixing member (17) comprises a projection of the clamp (7) connected with the bracket (6) by means of the connector (8). The connector (8) comprises a segment of a channel section which is attached from one side to the clamp (7), and from the other the connector (8) is attached to the bracket (6).
