Abstract (en)
A heat transfer plate (8) and a heat exchanger (2) comprising a plurality of such heat transfer plates are provided. The heat transfer plate comprises a heat transfer pattern of alternately arranged ridges (36) and valleys (38) in relation to a central extension plane (C) of the heat transfer plate. First and second adjacent ones of the ridges (36a, 36b) comprise a first top portion (40a) and a second top portion (40b), respectively, and first and second adjacent ones of the valleys (38a, 38b) comprise a first bottom portion (42a) and a second bottom portion (42b), respectively. The first bottom portion of the first valley is connected to the first top portion of the first ridge by a first flank (44a) and to the second top portion of the second ridge by a second flank (44b), and the second top portion of the second ridge is connected to the second bottom portion of the second valley by a third flank (44c). One of the first, second and third flanks comprise a flank shoulder (46a, 46b, 46c) extending in a flank shoulder plane (S1, S2, S3) which is displaced from the central extension plan. With reference to a cross section through, and perpendicular to a longitudinal extension of, the first and second ridges and the first and second valleys, a first area (A1) enclosed by the heat transfer plate and a first shortest imaginary straight line (L1) extending from the first to the second top portion of the first ridge and the second ridge, respectively, is different from a second area (A2) enclosed by the heat transfer plate and a second shortest imaginary straight line (L2) extending from the first to the second bottom portion of the first valley and the second valley, respectively.
