Abstract (en)  
[origin: WO2016087646A1] The invention relates to an electrode for electrostimulation, comprising an electric path (1) having a storage structure for an electrolyte which comprises a front side for placing the electrode onto the skin of a living being and a rear side for making electric contact, and at least one electrically conductive contacting structure (2) characterised in that an electric pad (1) comprises at least one barrier structure (12) for preventing a lateral flow of electrolytes.
