Abstract (en)

[origin: WO2016087276A1] The invention relates to a device (10) and to a method for pastillating a flowable product, in particular a melt, comprising a circulating belt (18) and a drop former (14), wherein the drop former deposits product drops (20) on an upper run of the belt, wherein the product drops solidify into pastilles on the upper run of the belt in the course of the transport and wherein means (32, 38) for wetting the belt by means of a liquid parting agent are provided upstream of the region in which the product drops are deposited on the belt, wherein the parting agent prevents or reduces the adhesion of the product drops to the belt, and wherein a proportional metering pump (54) is provided in order to continuously mix the parting agent from at least two liquid components during the operation of the device.
