Abstract (en)

[origin: WO2016087572A1] The invention relates to a folding tool (2) and a method for bending and folding a workpiece (5) in multiple steps. Said folding tool (2) includes three or more driven folding elements (13, 17, 21) which are positioned on top of one another and are fed to a common folding point, at least one folding element (17, 21) performing a swiveling movement. The folding tool (2) is used for successively creating folds with fold angles of about 160° or more in a plurality of folding steps.
