Abstract (en)

[origin: GB2532952A] A package assembly comprises a carton 4 having a main body 20 including a bottom, top, front, and rear walls 24, 22, 26, 28 which define an interior volume in which a tray 6 is retained. The tray has peripheral flange 14 and is closed by means of flexible film 16 peelably secured to the flange. An opening 34 in the top wall allows the film to be peeled open whilst the tray is in the carton. The bottom, top, front, and rear walls define a tubular sleeve and the front wall has a supporting region 26a in which a supporting structure is located below a portion of the flange. The tray can be inserted into a partially erected carton 4 from one side.
