Abstract (en)  
[origin: WO2015013741A1] An indirect lighting device which may be adjusted to direct a light source onto adjacent surfaces and means of assembly. The device comprises of an adjustable support arm, luminaire body and light source, wherein the luminaire body is mechanically coupled to the adjustable support arm, attaching the lighting device to the adjacent surface. The light source is supported by the luminaire body such that it is directed backwards towards the mounting surface, the light source may be directed by means of the adjustable support arm which permits a pivoting movement of the luminaire body about at least one axis.
