Abstract (en)

[origin: WO2016087171A1] The present invention relates to a linear actuation system (3) comprising a reversible linear actuator of the screw-nut type equipped with at least one reversible electric motor system (4) and with energy-storage means (5). The energy-storage means (5) are charged by the linear actuation system (3) operating as a generator and discharge on demand into the electric motor (4).
