Abstract (en)
[origin: US2017291046A1] A harness including a belt and a pair of thigh straps connected by a strap, the harness including a ventral suspension point including a connector attached to the ventral part of the belt. The connector includes: a rod of longitudinal axis AA mechanically connecting the connector to the belt, a first part including a connecting ring, and mounted movable in rotation with respect to the belt around the rod, a C-shaped second part mounted movable in rotation around a second axis BB parallel to the axis AA and defining a closed contour with the axis BB, the first part and second part being able to be separated from one another so as to allow insertion of at least one accessory for progression on a rope in the C-shaped second part. Also relates to a method for fitting a connector and using a connector on such a harness.
