Abstract (en)
[origin: EP3228751A1] Support for e.g. road and traffic signs, where the support comprises at least a first surface and a second surface, where the support further comprises at least two-parts, a first part and a second part with an assembly surface, where the first part and the second part are complementary to each other, where the first part makes up most of the second surface and the second part makes up most of the first surface and, where the first part and the second part comprise interlocking means, configured for locking the support in a first direction X and a second direction Y, whereby it is achieved that the support does not create problems when handled during setup and relocation, hence where the supports are better than prior-art technology.
